MPCA, SOLID & HAZ
WASTE DIVISION

Stephen D. Riner, Project Manager
Minnesota Pollution Control Agency
1935 West County Road B2
Roseville, Minnesota 55113-2785

Dear Mr. Riner:

In regards to your letter about the pollution control at Hensley's Auto Supply. You asked if we dumped any hazardous waste at Kummer Sanitary Landfill. We did not dump any hazardous waste there. We did, however, dump solid waste there. This waste was our garbage from the garage and the household.

As for the hazardous waste products used at Hensley's Auto Supply, we store our used materials in 55 gallon drums. Last summer Marlin Johnson picked up these materials which he pumped out of our drums. In these drums we had stored any used oil and old cleaning solvents. The anti-freeze at Hensley's Auto Supply from the cars is usually reused. We add this to systems rather than adding water. Therefore, we don't have to store any old anti-freeze usually. However, if we do store any old anti-freeze, it too is stored in our 55 gallon drums.

NON-RESPONSIVE

The name of the cleaning solvent used is Petroleum Distillate-Solvent. This is what is written on the can.

If you have any further questions call 218-751-0094.

Sincerely,

Bill Hensley

Bill Hensley
